

ABHIJITH S

ASPIRING CYBERSECURITY PROFESSIONAL

abhijiths01022@gmail.com | +91-9745322050 | [linkedin.com/in/abhiwikky](https://www.linkedin.com/in/abhiwikky) | github.com/abhiwikky | abhijith.is-a.dev

PROFESSIONAL SUMMARY

Security-focused Computer Science graduate (B.Tech, LPU) with hands-on experience in network administration, identifying attack vectors, analyzing compromised systems, and mapping adversary TTPs to MITRE ATT&CK as well as incident response, threat detection, and cloud security monitoring. Led a full-scope incident response engagement for a client organization, investigating a 15-host malware outbreak from initial triage through containment and remediation, and tracing the intrusion to Chinese C2 infrastructure along the way. Backed by five industry certifications with a consistent track record of turning that knowledge into deployable tooling, including a kernel-level ransomware detection engine and an automated cloud threat-monitoring system. Looking to bring this investigative rigor and tooling mindset to a SOC or incident response team operating in a production security environment.

SECURITY EXPERIENCE

Freelance Incident Response Investigator · Referral-Based Engagement

June 2026

- Led solo incident response for a 15-host malware outbreak on a flat LAN, from triage through containment and remediation, for a non-technical small business referred via personal network.
- Reverse-engineered 2 multi-layer VBS malware samples - decoding obfuscated dropper stages and tracing the full payload delivery chain to uncover the exploited weakness and the final-stage persistence mechanism (ManageEngine UEMS RMM agent).
- Documented 5 indicators of compromise and mapped adversary TTPs to MITRE ATT&CK; identified C2 infrastructure hosted on Chinese dynamic DNS providers.
- Authored an IR audit methodology and remediation playbook covering IOC sweeping, registry forensics, and network traffic analysis.

PROJECTS

Behaviour Based Ransomware Detection and Response

Jan 2025

Stack: C++ (Kernel Minifilter Driver), Rust, ONNX/ML, React, Node.js, gRPC, NT APIs

- Architected a real-time detection engine monitoring file entropy spikes, mass I/O anomalies, shadow copy deletions, and ransom-note drop patterns to flag exploit behavior at the host level, achieving detection latency under 10ms.
- Engineered a Windows Kernel Minifilter Driver (C++) for low-overhead, high-fidelity event tracing in, paired with a Rust-based detection agent performing ML-driven threat correlation, trained and validated on a synthetic dataset of 100000 samples.
- Implemented automated process quarantine via native NT APIs and built a real-time SOC dashboard (React / Node.js / gRPC) giving operators visibility into detected threats and one-click response actions.

AWS Cloud Security Monitoring System

Feb 2026

Stack: AWS CloudTrail, CloudWatch, SNS, S3, IAM

- Designed and deployed a multi-region cloud threat detection system using CloudTrail log streams and CloudWatch metric filters/alarms to surface unauthorized access, IAM policy misconfigurations, and sensitive data exposure - vulnerability classes commonly flagged in cloud security assessments.
- Reduced mean time to detect (MTTD) security events through automated SNS alerting pipelines by 90%; implemented S3-based centralized log storage with integrity validation to support compliance auditing and forensic workflows.

SKILLS

Cybersecurity: Vulnerability Assessment, Network Security, Penetration Testing, Security Auditing, IAM, Risk Assessment, MITRE ATT&CK

Tools: Splunk (SIEM), Wireshark, Nmap, Nessus, Burp Suite, Wazuh, Nikto, Metasploit, Hydra, Aircrack-ng Suite, SQLmap, ffuf, Git, VMware, VirtualBox, Docker, Volatility 3, FTK Imager, Autopsy Cisco Packet Tracer

Networking: TCP/IP, OSI Model, Subnetting, DNS, DHCP, NAT, VLAN, Routing & Switching, VPN Fundamentals, Network Troubleshooting

Development: Python, Rust, C++, Bash - scripting, automation, tooling, kernel-level drivers

Cloud & Infra: AWS (CloudTrail, CloudWatch, SNS, S3, IAM), Identity & Access Management, Compliance Fundamentals (NIST), Docker, Git/GitHub

Operating Systems: Linux (advanced - administration, scripting, package management), Windows (advanced - registry, WMI, ETW, NT APIs)

CERTIFICATIONS

CompTIA Pentest+ ce (Apr 2026) · CompTIA CySA+ ce (Mar 2026) · CompTIA Security+ ce Nov 2025)

Quick Heal CDFI (Jan 2025) · CompTIA Network+ ce (Jul 2024)

ACHIEVEMENTS & COMMUNITY

- Participated in Trivarna CTF and made it to 46th position among 377 teams, with a team score of 9200.
- Secured ₹1,00,000 seed funding for early-stage startup development, demonstrating entrepreneurial initiative and product vision to investors (May 2024)
- Participated in CRACCON 2025 - attended CXO panels, threat intelligence workshops, and offensive security tech labs (Oct 2025)
- Attended DSCI AISS 2024 - gained exposure to enterprise security governance, policy frameworks, and industry IR practices (Dec 2024)

EDUCATION

- **B.Tech Computer Science & Engineering (Hons.)** · Lovely Professional University
CGPA: 7.57 | Specialisation: Cybersecurity and Blockchain

Aug 2022 – Jun 2026

- **12th Science (91.4%) / Matriculation (98%)** · Sree Narayana Central School, Mavelikkara, Kerala (CBSE)
